AMD Debugger: ROCgdb

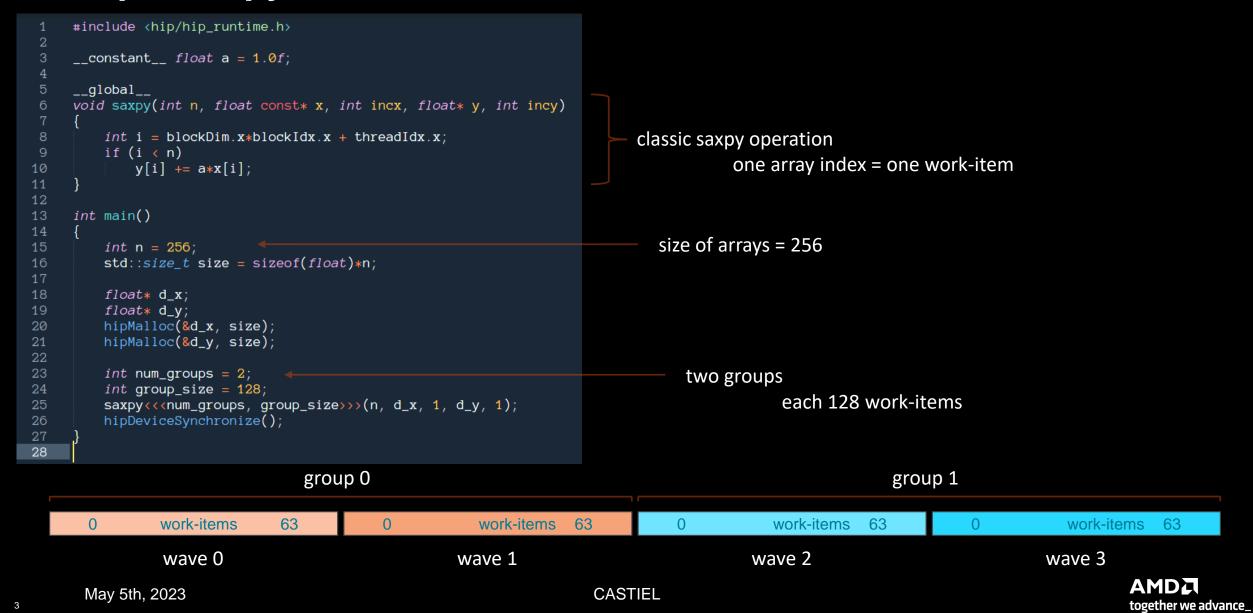

Bob Robey and Suyash Tandon EuroCC-AMD Workshop May 5th, 2023

Rocgdb

- AMD ROCm[™] source-level debugger for Linux[®]
- based on the GNU Debugger (GDB)
 - tracks upstream GDB master
 - standard GDB commands for both CPU and GPU debugging
- considered a prototype
 - focus on source line debugging
 - no symbolic variable debugging yet

Simple saxpy kernel

Cause a page fault

```
#include <hip/hip_runtime.h>
     __constant__ float a = 1.0f;
     __global__
     void saxpy(int n, float const* x, int incx, float* y, int incy)
         int i = blockDim.x*blockIdx.x + threadIdx.x;
         if (i < n)
             y[i] += a*x[i];
10
11
12
     int main()
13
14
         int n = 256;
16
         std::size_t size = sizeof(float)*n;
17
         float* d x;
18
         float* d_y;
19
         // hipMalloc(&d_x, size);
         // hipMalloc(&d_y, size);
21
         int num_groups = 2;
         int group_size = 128;
         saxpy<<<num_groups, group_size>>>(n, d_x, 1, d_y, 1);
         hipDeviceSynchronize();
26
27
28
```

Break it by commenting out the allocations. (better to initialize the pointers to nullptr)

It's important to synchronize before exit.

Otherwise, the CPU thread may quit before the GPU gets a chance to report the error.

AMD together we advance_

Compilation with hipcc

```
#include <hip/hip_runtime.h>
     __constant__ float a = 1.0f;
     __global
     void saxpy(int n, float const* x, int incx, float* y, int incy)
         int i = blockDim.x*blockIdx.x + threadIdx.x;
         if (i < n)
             y[i] += a*x[i];
10
11
12
     int main()
13
14
         int n = 256;
16
         std::size_t size = sizeof(float)*n;
17
                                                saxpy$ hipcc --offload-arch=gfx90a -o saxpy saxpy.cpp
         float* d_x;
         float* d_y;
19
         // hipMalloc(&d_x, size);
21
         // hipMalloc(&d_y, size);
22
         int num_groups = 2;
24
         int group_size = 128;
         saxpy<<<num_groups, group_size>>>(n,
         hipDeviceSynchronize();
27
28
```

Need be, set the target

- gfx906 MI50, MI60, Radeon™ 7
- gfx908 MI100
- gfx90a MI200

Execution

```
#include <hip/hip_runtime.h>
     \_constant\_ float a = 1.0f;
     __global__
     void saxpy(int n, float const* x, int incx, float* y, int incy)
         int i = blockDim.x*blockIdx.x + threadIdx.x;
         if (i < n)
             y[i] += a*x[i];
11
12
13
     int main()
14
         int n = 256;
                                               saxpy$ hipcc --offload-arch=gfx90a -o saxpy saxpy.cpp
16
         std::size_t size = sizeof(float)*n;
                                               saxpy$ ./saxpy
17
         float* d_x;
         float* d_y;
19
         // hipMalloc(&d_x, size);
21
         // hipMalloc(&d_y, size);
22
         int num_groups = 2;
24
         int group_size = 128;
         saxpy<<<num_groups, group_size>>>(n,
         hipDeviceSynchronize();
28
```

In this example we have already allocated a GPU with salloc

Get a page fault

```
#include <hip/hip_runtime.h>
     __constant__ float a = 1.0f;
     __global
     void saxpy(int n, float const* x, int incx, float* y, int incy)
         int i = blockDim.x*blockIdx.x + threadIdx.x;
         if (i < n)
             y[i] += a*x[i];
11
12
13
     int main()
14
                                                saxpy$ hipcc --offload-arch=gfx90a -o saxpy saxpy.cpp
         int n = 256;
                                                saxpy$ ./saxpy
         std::size_t size = sizeof(float)*n;
16
17
                                                Memory access fault by GPU node-2 (Agent handle: 0x2284d90) on address (nil). Reason: Unknown.
         float* d_x;
                                                Aborted (core dumped)
         float* d_y;
19
                                                saxpy$
         // hipMalloc(&d_x, size);
21
         // hipMalloc(&d_y, size);
22
         int num_groups = 2;
24
         int group_size = 128;
         saxpy<<<num_groups, group_size>>>(n, c
         hipDeviceSynchronize();
28
```

Common gdb commands

Start GDB (GNU Debugger)

- •gdb core dump]
- •gdb -args <args>
- •gdb -help

Run commands

- r[un] Runs the program until a breakpoint or error
- **c[ontinue]** Continues running the program until the next breakpoint or error **q[uit]** or **kill** Quits **qdb**
- fin[ish] Runs until current function or loop is finished
- n[ext] Runs the next line of the program
 - n N Runs the next N lines of the program
- **s[tep]** Runs the next line of the program, stepping into any called routines
- until N Runs until you get N lines after the current line

Breakpoint commands

- **b[reakpoint] <where>** set breakpoint
 - **b main** Puts a breakpoint at the beginning of the program
 - **b** Puts a breakpoint at the current line
 - **b N** Puts a breakpoint at line N
 - **b** +N Puts a breakpoint N lines down from the current line
 - **b** fn Puts a breakpoint at the beginning of function "fn"

b/w <where> if <condition - conditional breakpoint or watch

- i[nfo] b[reak] list breakpoints
- dis[able] N disable breakpoint number N
- en[able] N enables breakpoint number N
- d[elete] N delete breakpoint number N
- clear clear all breakpoints

Print commands

- [h]elp <command>
- [p]rint var Prints the current value of the variable "var"
- [I]ist list lines
- bt (backtrace) Prints a stack trace

Movement

- **up** Goes up a level in the stack
- [do]wn Goes down a level in the stack

Execution with rocgdb

```
#include <hip/hip_runtime.h>
     __constant__ float a = 1.0f;
     __global__
     void saxpy(int n, float const* x, int incx, float* y, int incy)
         int i = blockDim.x*blockIdx.x + threadIdx.x;
         if (i < n)
             y[i] += a*x[i];
11
12
     int main()
14
         int n = 256;
         std::size_t size = sizeof(float)*n;
17
         float* d_x;
                                                 saxpy$ rocgdb saxpy
19
         float* d_y;
         // hipMalloc(&d_x, size);

```

Quick tip

- Frontier and LUMI CPUs have 64 cores / 128 threads.
- If you're debugging an app with OpenMP threading and OMP_NUM_THREADS is not set you will see 128 CPU threads in rocgdb.
- Set OMP_NUM_THREADS=1 when debugging GPU codes.

Breakpoint

We try to put a breakpoint in line 22 but it is declared as line 24.

```
--Type <RET> for more, q to quit, c to continue without paging--For help, type "help".

Type "apropos word" to search for commands related to "word"...

Reading symbols from saxpy...

(gdb) b saxpy.cpp:22

Breakpoint 1 at 0x20d57f: file saxpy.cpp, line 24.

(gdb) _
```

CASTIEL

How to use rocgdb + gdbgui + Chrome

test if X forwarding works

```
ssh -X USERNAME@server
ssh -X login1.____.olcf.ornl.gov
srun -A VEN113 -N 1 -n 1 -c 64 --x11 --pty bash
xmessage -center hello!
```

install gdbgui

```
python3 -m pip install --user pipx
python3 -m userpath append ~/.local/bin
pipx install gdbqui
```

install Chrome

- Go to https://www.google.com/chrome/
- Click Download Chrome
- Click 64 bit .rpm (For Fedora/openSUSE)
- Click Accept and Install

```
scp google-chrome-stable_current_x86_64.rpm USERNAME@home.ccs.ornl.gov:
ssh -X USERNAME@home.ccs.ornl.gov
mkdir ~/chrome
cd ~/chrome
rpm2cpio ../google-chrome-stable_current_x86_64.rpm | cpio -id
```

run rocgdb with gdbgui in Chrome

- In Chrome, go to: http://127.0.0.1:5000
- Click Load Binary to load your binary (compiled with -ggdb)
- Step into a kernel
- Click fetch disassembly

```
show architecture
info threads
info queues
info dispatches
info registers
info reg vcc
info reg exec
s
si
n
ni
...
v:
```
